ENERGY AND ENVIRONMENTAL ECONOMICS, INC.
Managing Consultant

San Francisco, CA

Dr. Nelson advises utilities, system operators, and state agencies on the operations, economics, and planning of electricity systems with large amounts of variable renewable energy resources. He supports the California Public Utility Commission's integrated resource planning process and was E3's technical manager for the development of the CPUC's 2019-20 Reference System Plan. His study *Investigating the Economic Value of Flexible Solar Power Plant Operation* received the Public Utility Fortnightly's Top Innovators Award in 2018. He is a product manager of E3's RESOLVE planning model and is a technical advisor to many E3 projects.

Prior to joining E3 in 2016, Jimmy was a Kendall Science Fellow at the Union of Concerned Scientists and earned a Ph.D. from the Energy and Resources Group at the University of California, Berkeley. Jimmy began his career in energy working to make solar panels cheaper when cost was one of the main barriers to adoption. More than a decade later, he is helping clients understand how to manage and use frequent surpluses of renewably sourced electricity.

Select E3 projects include:

- **RESOLVE model product manager and developer, 2016-Present.** Dr. Nelson co-manages the development and use of E3's RESOLVE model, an in-house capacity expansion model that adds capacity expansion logic to a simplified production simulation model to produce an optimal investment plan.
- **Integrated Resource Planning Implementation Support, California Public Utilities Commission, 2016-Present.** Dr. Nelson frequently contributes to E3's CPUC IRP support work, conducting specialized analysis and engaging with CPUC staff and a broad range of stakeholders on the implementation of California's system-wide electricity plan. Using the RESOLVE model, Dr. Nelson and E3 staff have modeled least-cost resource portfolios for the electricity system consistent with the state of California's long-term greenhouse gas reduction goals.
- **Extended Day Ahead Market (EDAM) support, California Independent System Operator and EIM Entities, 2019.** Dr. Nelson helped E3 staff calculate and validate reserve and balancing needs for 14 Western Interconnection balancing areas using E3's RESERVE model.
- **Investigating the Economic Value of Flexible Solar Power Plant Operation, First Solar, 2018.** Modeling four modes of solar plant operation on Tampa Electric Company's system, Dr. Nelson led a study finding that flexible solar plants can not only contribute to solving operating challenges related to solar variability but can also provide essential grid services, and that benefits from flexible solar operation increase as solar penetration increases.
- **BANC EIM Benefits Analysis, Balancing Area of Northern California, 2016.** Dr. Nelson was the technical lead on E3's study of the benefits to BANC members of participating in the Western Energy Imbalance Market. The E3 team worked closely with representatives from all BANC members to model the operations of their respective electric systems using PLEXOS production

simulation software, providing a clear illustration of the EIM value proposition for each BANC member.

UNION OF CONCERNED SCIENTISTS

Energy Modeling with Senior Energy Analyst Laura Wisland

Oakland, CA
2013 – 2015

Project: Operational flexibility at high fractions of variable renewable energy in California

- Production cost modeling using PLEXOS and REFLEX models
- Expert testimony and public comments on energy policy and planning
 - California Public Utilities Commission: Long Term Procurement Plan
 - California Independent System Operator: Frequency Response Stakeholder Process
- Interaction with many stakeholders in the California electricity modeling and policy community
- Kendall Postdoctoral Fellowship (2013 – 2014)

UNIVERSITY OF CALIFORNIA, BERKELEY, Energy Resources Group

Doctoral Research with Professor Daniel Kammen

Berkeley, CA
2009 – 2013

Dissertation Title: “Scenarios for Deep Carbon Emission Reductions from Electricity by 2050 in Western North America Using the SWITCH Electric Power Sector Planning Model”

- Electric power system planning using high spatial and temporal resolution computer modeling
- Renewable energy deployment, integration, economics, and public policy
- Linear programming, database management, and geospatial information systems

UNIVERSITY OF CALIFORNIA, BERKELEY, Department of Chemistry

Master’s Research with Professor A. Paul Alivisatos

Berkeley, CA
2006 – 2008

Project: Nanoparticle synthesis, characterization, and computer modeling for solar energy conversion

Education

University of California, Berkeley
Ph.D., Energy and Resources
Link Foundation Energy Fellowship

Berkeley, CA
2013
2011 – 2013

University of California, Berkeley
M.S., Chemistry

Berkeley, CA
2008

Haverford College

B.S. with High Honors, Chemistry

American Chemical Society Philadelphia Chapter Undergraduate Award

American Chemical Society Division of Analytical Chemistry Undergraduate Award

Haverford, PA
2006
2006
2005

Citizenship
