ENERGY AND ENVIRONMENTAL ECONOMICS, INC.

San Francisco, CA

Director

Dr. DeBenedictis rejoined E3 in summer 2018. He works in E3's Boston office, where he helps clients in New England and elsewhere work towards a cleaner, more efficient energy sector. A member of E3's planning team, Dr. DeBenedictis has investigated Clean Energy Standards as an approach to meeting state carbon reduction targets and has helped design Performance Incentive Mechanisms (PIMs) to promote cross-sectoral decarbonization. He also uses E3's extensive modeling capabilities to analyze and enhance utility grid modernization strategies.

Dr. DeBenedictis originally worked at E3 for five years before attending graduate school. During that time, he contributed to E3's landmark study, published in the journal *Science*, that analyzed the technology path to deep decarbonization by 2050. He also helped the California Public Utilities Commission develop a successor to its net energy metering (NEM) tariffs and conducted extensive rate design analysis for large commercial and industrial customers.

Dr. DeBenedictis received a Ph.D. and M.S. in Physics from Tufts University, and a B.A. in Physics and Astronomy from Bowdoin College.

PHYSICS AND ASTRONOMY DEPARTMENT

Medford, MA

Tufts University – Research Assistant

2013 – 2018

- Developed Mathematica-based finite element model with adaptive moving mesh to solve shape/field coevolution problems
- Created C-based finite difference model to investigate liquid crystal behavior between patterned substrates
- Shared research findings through presentations and posters at more than 10 conferences
- Collaborated on research with peers and faculty from Tufts University Department of Mathematics, UNSW Chemical Engineering, UC Merced Department of Physics, UPenn Materials Science and Engineering, and Sheffield Hallam University Materials and Engineering Research Institute

ENERGY AND ENVIRONMENTAL ECONOMICS, INC. (E3)

San Francisco, CA

Consultant

2008 – 2013

- Supported projects involving resource planning, rate design, cost-effectiveness evaluation, and modeling future emissions scenarios
- Designed several quantitative models utilized in public proceedings and for utility planning
- Managed projects totaling over \$1 million in contracted funds

- Clients included British Columbia Hydro (BCH), the California Public Utilities Commission (CPUC), the California Independent Systems Operator (CAISO), Lower Valley Energy (LVE), Pacific Northwest Generating Cooperative (PNGC), and Lawrence Berkeley National Laboratory (LBNL)

PHYSICS AND ASTRONOMY DEPARTMENT

Bowdoin College – Research Assistant

Brunswick, ME

2007 – 2008

- Created Mathematica computer programs to calculate parameters for and investigate various string theory configurations

RESEARCH EXPERIENCE FOR UNDERGRADUATES (REU)

Michigan State University – Research Assistant

East Lansing, MI

Summer 2007

- Built FORTRAN computer program to model bulk-heterojunction polymer solar cells to optimize cell efficiency

Education

Tufts University

Ph.D., Physics

Burlingame Fellowship

Medford, MA

2018

2017

Tufts University

M.S., Physics

Provost Fellowship

Medford, MA

2015

2013 – 2015

Bowdoin College

B.A., Physics and Astronomy (Highest Honors)

Sarah and James Bowdoin Scholar (Dean's List)

Brunswick, ME

2008

2004 – 2005, 2005 – 2006, 2007 – 2008
