## **ENERGY AND ENVIRONMENTAL ECONOMICS, INC.** *Consultant*

Boston, MA

Dr. Wheatle joined E3 in Fall 2020. He currently works in the Boston office in E3's Climate Pathways practice area. He develops scenarios for economywide pathways to deep decarbonization and assesses the impact building electrification on the natural gas system. He also evaluates the technoeconomics of novel generation and energy storage technologies. Dr. Wheatle's interest in energy technology and policy arose from learning about climate change's effects on vulnerable communities, including those in the Caribbean where much of his family still lives. He studied battery materials as an undergraduate at Cornell University and as a doctoral student at the University of Texas at Austin.

Recent E3 projects include:

- **Pathways to Decarbonization Multi-Sectoral Modeling, Omaha Public Power District (2021).** Developed scenarios to meet an economywide net-zero emissions by 2050 target within OPPD's service using E3's PATHWAYS model. Using this model, outlined the benefits of various decarbonization strategies, including aggressive electrification or a high dependence on renewable fuels.
- **Maine Renewable Energy Goals Market Assessment, Maine Governor's Energy Office (2020 – 2021).** Developed scenarios for the State of Maine to achieve its 2030 renewable portfolio standard using an Excel-based model. Using this model, determined the cost and transmission implications of potential renewable policies and the possible value of coordination with out-of-state entities to achieve deep decarbonization within the electric sector.

## **UNIVERSITY OF TEXAS AT AUSTIN**

*Geothermal Entrepreneurship Organization Scholar*

Austin, TX  
Oct. 2020 – Aug. 2020

- Develop and manage preliminary survey of UT faculty
- Interview UT faculty and staff at depth to learn about technical capabilities relevant to baseload geothermal energy

*Graduate Research Assistant*

Aug. 2015 – Apr. 2020

- Manage multiple simultaneous projects in a variety of technical areas, including molecular dynamic simulation studies of polymeric battery materials
- Implement analyses in Fortran and Python to relate material properties to their performance in batteries
- Collaborate with research group members and outside subject matter experts
- Disseminate results in peer-reviewed journals, posters, and oral presentations
- Design projects for and work with undergraduate student research mentees

## Education

University of Texas at Austin

*PhD, Chemical Engineering.*

Dissertation: *Polymer Polarity as a Design Parameter for Polymer Electrolytes*

Austin, Texas

*Aug. 2015 – Apr. 2020*

Cornell University

*B.S. Chemical Engineering.*

Ithaca, New York

*Aug. 2011 – May 2015*

## Citizenship

United States, Trinidad and Tobago
